

MINI GOLF SCORECARD PWA

# Art & UI Style Guide

A print reference for the artist theming the app. Every screen, every button, every interface element — with the app's real materials rendered so you can match or deliberately diverge from them.

14 skins

Light + Dark

Per-course tint

28 screens & overlays

Full icon-slot set

## How to use this guide

1. **Read §1 (the theming contract) first.** Art plugs into three independent axes — skin × light/dark × course color. Respect the hooks and your art drops straight in.
2. **§2-§4 are the kit:** palette, type, motion, and the shared *materials* (buttons, surfaces, tiles, pucks, tags) rendered as real specimens.
3. **§5 is the coverage checklist.** Walk it screen by screen and tick every element — that's how we guarantee nothing's missed.
4. **§6 is the icon-slot set** (every emoji is a placeholder for a designed icon). **§7** is delivery specs. **§8** is the one-page master checklist.
5. **Validate live:** drop any asset into the running app at `/style` and cycle all skins × light/dark. Companion text spec: `docs/art-spec.md`.

Concrete sizes, colors, radii and fonts below describe what the app ships *today* — treat them as “e.g.” and a starting palette, not a mandate. What is **fixed** is the structure: the theming hooks, the element slots, and the functional constraints (tap-target sizes, safe areas, contrast). Those are flagged **[constraint]**.

01 The theming contract — read first

The app composes three independent visual axes on the page. Art must survive **every combination**, or ship one variant per relevant axis. A skin restyles only the shared *material* classes, so changing it re-skins every screen at once.

THE THREE AXES

| AXIS        | SET VIA                          | VALUES                                                                                                                        | WHAT IT CONTROLS                                                                                   |
|-------------|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| Skin        | data-template                    | unstyled (default), candy, blocky, uv, glass, chrome, underwater, fantasy, cyberpunk, forest, steampunk, nautical, space, zen | The <b>material</b> every surface is painted with (bevels, borders, glow, metal, glass).           |
| Mode        | data-theme                       | light, dark                                                                                                                   | The neutral ramp + inks invert. Panels stay dark in dark / light in light so text stays legible.   |
| Course tint | .course-tinted + --course-accent | any hex                                                                                                                       | Play / scorecard / rules screens wash their surfaces toward the course color (text stays neutral). |

PER-INSTANCE COLOR HOOKS (SET INLINE ON EACH ELEMENT — TRACK THESE)

| VARIABLE      | SET ON                   | MEANING                                                                  |
|---------------|--------------------------|--------------------------------------------------------------------------|
| --accent      | root / .course-tinted    | Interactive accent — house green, or the course color on themed screens. |
| --tile-accent | each course tile         | That course's hex (drives the tile body + colored lip).                  |
| --puck-accent | each course puck         | That course's hex (drives the domed cap).                                |
| --tag-accent  | each player tag          | Course hex, or #166534 house default.                                    |
| --glow        | resume card, winner hero | Accent color for the looping halo.                                       |
| --i           | list items / tiles       | Zero-based index → drives the stagger delay of entrance animation.       |

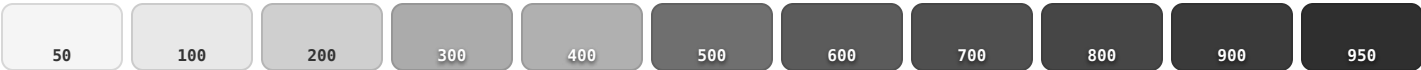

**How art plugs in.** Most elements are pure CSS today. To theme with art, either (a) replace a material with an SVG/PNG/WEBP background, or (b) supply per-skin and/or per-mode variants. **Prefer inline SVG** that inherits `currentColor` and reads `--accent / --tile-accent` where a color must track the course. Provide a light + dark treatment unless one asset clears contrast on both grounds.

**Emoji are placeholders, not a standard option.** Every glyph you see (course markers, controls, activity icons) is a stand-in. Each real theme ships its own **image icon set — SVG preferred, WEBP/PNG for illustrative icons**. A dedicated “Emoji” theme is the only exception. Treat every emoji in §5–§6 as a *slot that needs designed art*.

## 02 Color — the palette

Current default palette. A theme may retint the whole thing, but keep enough light↔dark separation for text contrast.

### NEUTRAL “FAIRWAY” RAMP — DARK (MODE-AWARE; INVERTS IN LIGHT)

Text: 50 (primary) → 100 (secondary) → 400 (muted/eyebrow). Surfaces & borders: 500 → 950. Light mode inverts (50= #1a1a1a ... 950= #eaeaea ).

### ACCENT, INKS & SCORE SIGNALS

Interactive accent & score

--accent (dark) #22c55e

--accent (light) #1f9d55

score-under (dark) #34d399

score-over (dark) #fbbf24

Accent = house green on hub screens; the **course color** replaces it on themed screens. Par = neutral fairway-100. Under-par reads green, over-par amber (both darken in light mode).

Per-course accents

Blue #3b82f6

Green #22c55e

Dragon #ea580c

Western #b45309

Red #ef4444

Per-location accents

Upland #38bdf8

Tukwila #f472b6

Wilsonville #facc15

Text inks ( `--ink-*` , dark / light)

| COURSE  | DARK    | LIGHT   |
|---------|---------|---------|
| default | #86efac | #157a3c |
| green   | #85e0a5 | #157a3c |
| blue    | #b1c3d8 | #3f5c7a |
| red     | #d7a49e | #9b4a42 |
| western | #dcc396 | #7a5a2e |
| dragon  | #fdb74  | #a34a08 |

Inks color **text on the neutral chrome** — player tags, par numerals, winner names, rules headings. They auto-darken in light mode to hold WCAG-AA.

Confetti palette

#22c55e #f0fdf4 #fbbf24 #38bdf8 #f472b6 #a78bfa #fb923c

Fired on round-complete & on landing on the leaderboard. Three particle shapes (rect / streamer strip / circle). Themed particle shapes are optional art.

Contrast [constraint].

Text/icons on their ground ≥ **4.5:1** (normal) / **3:1** (large ≥24px or bold ≥18.66px, and non-text UI). Player tags on bright course accents are the known tight spot — verify each.

03 Typography & motion

The app ships system font stacks today for zero-download performance, but **typography is one of the biggest levers a theme has** — you're expected to bring your own faces. Fill both roles; the families are open.

Two type roles

- **UI / body face** — screens, buttons, copy. Current default: system sans (a chunky display weight for headings suits the arcade tone).
- **Mono / “arcade” face** — player tags, winner names, the scorecard tag column, rank numerals. Current default: system mono + `.font-arcade` (letter-spacing 0.15em). Keep it monospaced enough to align in columns.

Scale (px, current): 48 · 36 · 30 · 24 · 20 · 18 · 16 (body) · 14 · 12 (eyebrow) · 11/10/9.5 (micro). Re-scale freely; preserve the hierarchy.

Weights: display *black* (900), body *bold* (700), eyebrows uppercase + wide tracking.

Custom fonts must be self-hosted / bundled — the app avoids external font CDNs. Ship the files with the theme.

Motion catalogue — art must hold up mid-animation

| CLASS        | TRIGGER             | REDUCED-MOTION |
|--------------|---------------------|----------------|
| page-in      | route mount         | fade           |
| rise-in      | list rows (++-i)    | fade           |
| pop-in       | hero tiles/cards    | fade           |
| score-punch  | stroke ±            | none           |
| trophy-pop   | winner / game over  | none           |
| result-swell | spinner landing     | fade           |
| glow-pulse   | resume / winner CTA | dropped        |
| wiggle       | Home hero 🚩         | none           |
| btn-sheen    | primary btn mount   | dropped        |

LAYOUT & METRICS

Column & radii

Column: `max-w-md` = **448px** portrait, centered, 16px content padding. Compose art to a ~448px column.

Radii (current example): 8 (lg) · 12 (xl) · 16 (2xl) · 24 (3xl) · full. A theme may pick its own corner language (sharp, pill, etc.).

Constraints — honor these

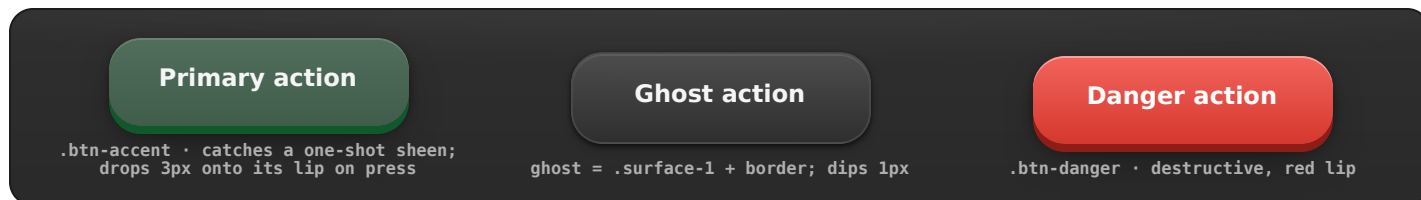

**[constraint] Safe areas:** body pads `env(safe-area-inset-*)`; the top bar pins below the notch. Keep art clear of notch / home-indicator zones.

**[constraint] Tap targets:** interactive elements ≥ ~44px hit area — current keys 56×56, back 40×40, control pills 36×36, buttons ~52 tall. Style freely but don't shrink below a comfortable touch target.

## 04 The material kit — shared surfaces & controls

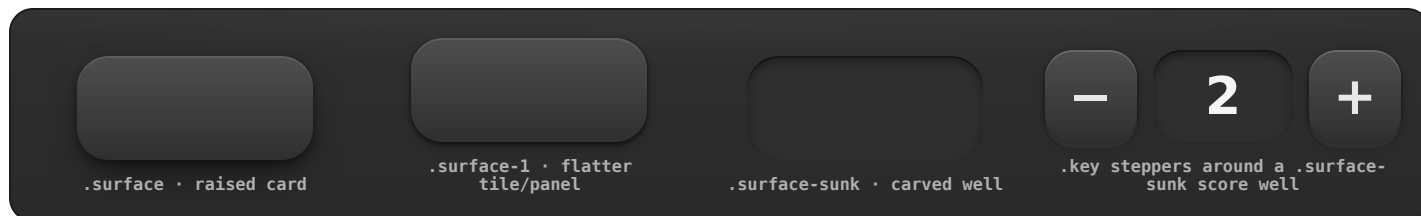

These are the highest-leverage things to theme: a handful of *material* classes back nearly every card, panel and control on every screen. Below they're rendered with the app's real **candy** (dark) treatment. Re-theming these re-skins the whole app.

### BUTTONS

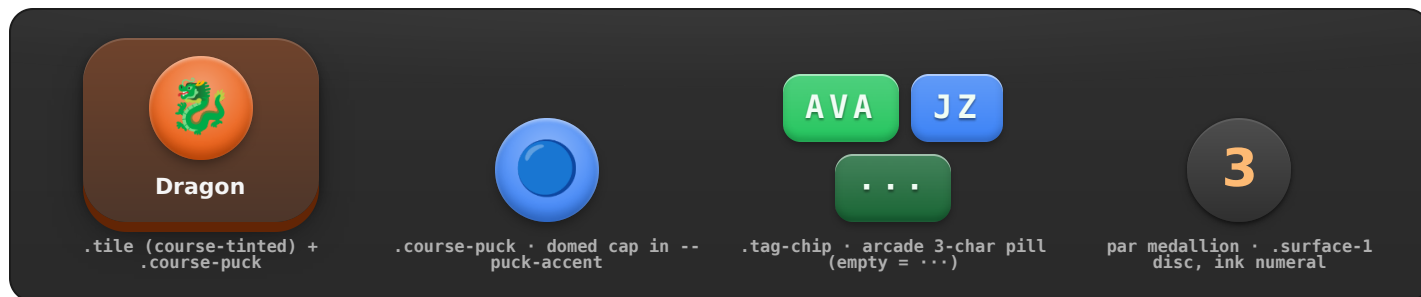

**Art needed:** the button “face” material + optional pressed state, for each variant. Label is `fairway-50` text (keep  $\geq 4.5:1$ ). Disabled = flat, no lip, 40% opacity.

### SURFACES (MATERIALS, NOT SHAPES) & THE STEPPER KEY

**Art needed:** three material treatments — raised (`.surface`), semi-raised (`.surface-1`), carved (`.surface-sunk`) — that read in light + dark; plus a neutral key face with its `+ / -` marks. The score number punches on each tap (`score-punch`).

### COURSE IDENTITY — TILE, PUCK, TAG, MEDALLION

**Art needed:** the tile face material + colored lip (course-tinted), the domed puck cap, the tag pill (text must stay  $\geq 4.5:1$  on bright accents), and the par disc. The **puck center is the #1 place a bespoke course-icon replaces emoji** — see \$5 & \$6.

**Every material also has a per-skin restyle.** The specimens above are the `candy` look. The same classes become fat-inked (blocky), neon-glow (uv), frosted (glass/underwater), brushed-metal (chrome), or fully-illustrated (fantasy, forest, nautical, space, zen, steampunk, cyberpunk). See \$4b.

## 04b The 14 skins

A skin is a *material* layer selected with the 🎨 picker. Each keeps panels dark-in-dark / light-in-light so the text ramp stays legible; its identity comes from structure (bevels, outlines, glow, glass, metal, painted scenes) + the accent. ■ **CSS-only** skins need no image assets; ■ **image-kit** skins already ship painted course cards / frames / menu icons under `public/themes/<skin>/` and are where new illustrative art lives.

### Unstyled default

Plain & flat baseline — flat fills from the neutral ramp, hairline borders, no bevels/gloss.

■ **CSS-only**

### Candy candy

Glossy arcade keys — the base look rendered in \$4. 3D lips, bevels, one-shot sheen.

■ **CSS-only**

### Quirky Blocky blocky

Toybox neubrutalism — fat ink outlines + hard offset shadows on a dotted paper ground.

■ **CSS-only**

### UV Party uv

Blacklight neon — dark glass rimmed in neon (dark) / neon-on-white (light), glowing pucks.

■ **CSS-only**

### Glassy glass

Frosted translucent panels over an aurora gradient; backdrop-blur, bright top highlight.

■ **CSS-only**

### Chrome chrome

Liquid metal — gunmetal (dark) / brushed aluminium (light), polished bevels & metal caps.

■ **CSS-only**

### Underwater underwater

Deep-ocean glass — god-rays & abyss floor, cyan-lit glass panels, glossy dimpled golf balls. Ships painted course tiles.

■ **image-kit (tiles, frame, menu icons)**

### Fantasy Medieval fantasy

Illustrated adventure — heraldic crests, stone panels; light ships fully-composed course cards.

■ **image-kit (cards, crests, scenes)**

### Cyberpunk Neon cyberpunk

Rain-slick neon city — glowing “billboard” course cards over a night skyline / day street.

■ **image-kit (cards, bg, menu icons)**

### Enchanted Forest forest

Glowing woodland — parchment panels, fully-composed forest course cards, both modes.

■ **image-kit (cards, frame, bg)**

### Steampunk Victorian steampunk

Brass & clockwork — brass-framed Victorian-city course cards, both modes.

■ **image-kit (cards, frame, bg)**

### Nautical / Pirate nautical

Moonlit harbor — wood-framed pirate-cove course cards, aged parchment panels.

■ **image-kit (cards, frame, bg)**

### Space / Galactic space

Crystal cosmos — metal-framed space-colony course cards with hex crests.

■ **image-kit (cards, frame, bg)**

### Zen Garden zen

Cherry-blossom calm — fret-corner framed garden course cards, paper panels.

■ **image-kit (cards, frame, bg)**

**Image-kit anatomy (per theme, per course).** A composed `card-<course>.webp` (frame + scene + crest + name baked in — the tile then hides its own label/puck), or a `tile-<course>.webp` scene + separate `puck/crest`. Plus a `frame.webp`, `bg-dark/light.webp`, and menu-icon set (`menu-hunt/wait/rules/leaderboard.webp`, `pin.webp`). Course keys: blue, green, dragon, western (Upland's Blue/Green map to california/classic).

## 05 Screen-by-screen coverage checklist

Every screen and overlay, with each interface element as a tick-box. Walk this list to confirm **every button and every interface is covered**. Shared frame on most screens: `Screen > TopBar (title + < back) > Content`, with the global control pills at top-right.

### A · CORE SCORECARD FLOW

#### Home /

Landing hub — pick a course, resume a round, reach maps / rules / leaderboard / install.

- ☐ **Header control pills** — light/dark toggle + mute switch (top-right) shared
- ☐ **Hero glyph** — brand mark 🏆, wiggles on mount (transform-origin bottom) art
- ☐ **Location bar** — `.surface-1` row: 📍 pin, “LOCATION” eyebrow, venue name, “Change” → `/locations`
- ☐ **Resume-round card** — `.surface` + glow-pulse (—glow=course accent): course name + player tags; only when a round is in progress
- ☐ **Course tiles grid** — `.tile` per course: course-puck + marker + name; pop-in stagger; art variants (tile-art / puck-art / card-art) by skin
- ☐ **Empty state** — “No courses at this location yet.”
- ☐ **Menu — ghost buttons** — Scavenger hunt · 🧑‍🔧 While You Wait · Rules · See the leaderboard · 📱 Install (Install hidden when already installed)

#### Location Picker /locations

Choose the venue (manual or GPS); scopes which courses show. Optional `?next=` chains onward.

- ☐ **“Use my location” button** — 📍 GPS detect; disabled + “Locating...” while working (only if geolocation supported)
- ☐ **Detect status message** — amber text (error / progress)
- ☐ **Location rows** — 📍 chip tinted to the location accent, name, “N courses”, and a trailing “Current” label (selected) or > chevron
- ☐ **Selected vs unselected row states** — brighter border/fill + “Current” vs muted + chevron
- ☐ **Footer note** — placeholder-sites caption

#### Course Picker /new

Pick which course at the current location to score (one round = one course).

- ☐ **Location switcher row** — 📍 + name + “Change” → `/locations?next=/new`
- ☐ **Course tiles** — emoji badge (accent-tinted square) + course name + “N holes · par N” + > chevron → `/new/setup`
- ☐ **Empty state** — “No courses at this location yet.”

#### Player Setup /new/setup

Choose player count (1-4) and enter three-character arcade tags, then start.

- ☐ **Player-count selector** — 1 / 2 / 3 / 4 buttons; selected vs unselected states
- ☐ **Tag inputs** — arcade uppercase text field, 3 chars, “ABC” placeholder; one per active player; row index numeral
- ☐ **Invalid-tag error** — red border + inline message on a bad 3-char tag
- ☐ **Start round button** — primary; disabled until roster valid; “Starting...” while submitting
- ☐ **Form error line** — red, above Start
- ☐ **Dev-only** — ▶ Auto play · ⏩ Fast forward (ghost); course-not-found fallback screen

## Course Map `/courses/:id/map` course-tinted

Opening course screen — the map, and a giant “tap to begin” target that starts the round.

- ☐ **Full-screen “begin” button** — the whole panel is one tap target → `/new/setup`
- ☐ **Map illustration** — full-bleed course map in a framed container `art`
- ☐ **Emoji fallback panel** — large theme marker on an accent-tinted panel when no map asset exists
- ☐ **Prompt block** — “TAP ANYWHERE TO BEGIN” (pulsing) + “N holes · course name”
- ☐ **Not-found fallback** — “Course not found.”

## Scorecard (play screen) `/play/:clientId` course-tinted

The core loop — score one hole at a time for every player, with hole navigation; each edit persists instantly.

- ☐ **TopBar right cluster** — 🔍 Scavenger hunt → /hunt · 🎯 Challenge spinner → /fun/spinner · “Holes” toggle
- ☐ **Hole-jump grid** — 6-col keys: current = `.btn-accent`, done = `.surface-1`, unplayed = outline
- ☐ **Hole header** — “Hole N” eyebrow + big hole name (or big number if unnamed)
- ☐ **Par medallion** — `.surface-1` disc, par numeral in course ink
- ☐ **Player rows** — `.surface` card each: TagChip · — **key** · `.surface-sunk` **score well** (punch animation) · + **key** · hint line
- ☐ **Disabled ± states** — minus at floor, plus at stroke-cap (flat, 30% opacity)
- ☐ **Hole navigation** — < Prev (ghost) · Next > (ghost) — or — **Finish** (primary, cup sound) on the last hole; disabled until the hole/round is complete
- ☐ **Gating hints & stroke-cap footer** — “Score every player...”, “Max N strokes per hole”
- ☐ **Dev-only auto-play** — ⏸ Pause (danger) · ▶ / ⏭ (ghost) · status line

## Summary (final scorecard) `/play/:clientId/summary` course-tinted

Celebrates the winner, shows standings + hole-by-hole grid, syncs to the leaderboard.

- ☐ **Confetti overlay** — fires once on arrival `shared`
- ☐ **Winner hero** — `.surface` + glow: 🏆 trophy (trophy-pop), “Winner” / “Tied for the win”, winner tag in ink, total + over/under
- ☐ **Standings rows** — `.surface-1` : mono rank · arcade tag in ink · total + over/under
- ☐ **Nine-grid tables** — Front (1-9) & Back (10-18): par row, per-player rows; cells colored under-par (green) / over-par (amber) / par (neutral); empty = ·
- ☐ **Sync note** — “Saved to leaderboard ✓” / amber failure / “Saving...” / offline states
- ☐ **Action buttons** — 🏆 View leaderboard (ghost) → /tv · Done (primary) → /

## Rules `/rules`

Static, offline general rules + optional per-course notes. Read-only (only the back control is interactive).

- ☐ **General section** — “General” eyebrow + numbered list (mono numerals)
- ☐ **Course-note cards** — one `.course-tinted` card per course: accent corner-glow, theme marker + course name in ink, • bulleted notes (accent bullets)

## Install `/install`

PWA install landing (QR-code target); shows the right path per platform.

- ☐ **Hero** — 🍷 + “Add Mini Golf to your phone”
- ☐ **Installed branch** — ✅ “You're all set” + “Open the app” button
- ☐ **iOS branch** — 3 numbered steps (circular badges), ↑ Share & ➕ Add-to-Home glyphs, Safari-only warning box
- ☐ **Can-prompt branch** — “Install this on my device” button (native prompt) + dismissed-retry hint
- ☐ **Generic branch** — 3 numbered steps referencing ⋮ / ⋮ menu, warning box
- ☐ **Footer note** — “Nothing to download from a store...”

## B · LEADERBOARD & SCAVENGER HUNT

### TV Leaderboard /tv

Live high-score board (polls every 5s); highlights the just-played round on arrival.

- ☐ **Confetti** — fires once on first populated load
- ☐ **Period tabs** — Day / Week / Month / All; active vs inactive states
- ☐ **Standings rows** — rank (mono) · arcade tag · course name · total (black); **“You” pill** + ring highlight on your rows
- ☐ **“Your last round” pinned section** — capped-height list above the board when arriving from a summary
- ☐ **States** — amber error box (“needs the backend API”), empty (“No scores yet...”), loading

### Scavenger Hunt /hunt

Snap-a-photo hunt; a vision model verifies each find, tracked per player and per group. Gated on an in-progress round.

- ☐ **Gate / empty state** — 🔍 + “Start a round to play” + “Start new round” button (primary) → /new
- ☐ **Camera capture** — hidden file input, rear camera forced in prod (photo library allowed in dev) art (the 📷 Snap trigger)
- ☐ **“Playing as” selector** — TagChip buttons; selected = ring, others dimmed
- ☐ **Per-item cards** — found vs not-found states (border/fill)
- ☐ **💡 Hint toggle** — “💡 Hint” ↔ “Hide hint” (only if the item has a hint)
- ☐ **Count badge / found check** — ×N pill (countable) or ✓ (one-off found)
- ☐ **“Found by” row** — small TagChip per finder
- ☐ **📷 Snap button** — “Snap” / “Snap another” / “Checking...” / “Found” (locked)
- ☐ **Result banner** — verified · flagged (amber “photo of a screen”) · rejected
- ☐ **Load error box** — red

## C · ARCADE PUTT MINIGAME

### Arcade Putt /putt

A playable canvas mini-golf — drag-to-aim slingshot; 9-hole authored Course or procedural Endless. Fully offline.

- ☐ **Mode picker** — 🚩 + 🏁 “9-Hole Course” (primary) + ∞ “Endless” (ghost)
- ☐ **Status header** — “Hole N / 9” · “Par X · Strokes Y”
- ☐ **Canvas playfield** — drag back from the ball to aim/power (slingshot) art
- ☐ **Canvas markers** — aim arrow (green→amber→red by power) · POWER% meter · idle “grab me” ring · ball · cup + red flag · candy bumpers · greens/collar · hazards (rough / water / sand) · 💧 splash
- ☐ **Hint line** — dynamic (note style when a course note is active)
- ☐ **Play buttons** — “Next hole →” / “See scorecard →” (primary) · “Reset hole” (ghost) · “End run” (ghost, endless)
- ☐ **Complete screen** — 🏆 + per-hole scorecard list with result emoji (🏌️ ace · 🦉 · 🐦 · 🐦 par · 😊 · 😊) · “Play again” / “New run” · “Change mode” (ghost)

D · WHILE-YOU-WAIT FUN ZONE

Fun Zone hub /fun

Grid landing routing to every mini-game. Each tile = a rounded emoji chip + title, tinted to its own accent.

11 activity tiles (rise-in stagger) — Fun Facts · Trivia · Arcade Putt · Skee-Ball · Air Hockey · Bumper Cars · Bumper Boats · Axe Throwing · Batting Cages · Bowling · Go-Karts art: 1 icon each

**Shared minigame shell** (Skee-Ball, Air Hockey, Bumper Cars/Boats, Axe, Batting, Bowling, Go-Karts, Arcade Putt): a HUD counter row (score / ball / frame / timer) · a <canvas> playfield (rounded-2xl, border-fairway-800 ) · a mono hint line · a game-over screen (trophy-pop, 60px emoji, big score, **“Play again”**). Shared canvas FX: neon rims, radial sheen, corner vignette, particle bursts, screen-shake, flash overlays. **Art needed per game:** playfield background + sprites, drawn into the canvas (supply as sprite sheets / SVGs).

| GAME · ROUTE                                       | INTERACTION         | INTERFACE ELEMENTS & STATES                                                                                                                                                                             | SIGNATURE GLYPHS |
|----------------------------------------------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Fun Facts /fun/facts                               | tap flashcard       | Big card (6xl emoji + fact) → next; “Next fact →” button. Infinite, no win/lose.                                                                                                                        | →                |
| Trivia /fun/trivia                                 | tap answer          | “Q n of 10 · Score n”; answer buttons → correct (green ✓) / wrong (red ✕) / dimmed; “Next question →” / “See results”; results screen 🧠 + score + “Play again”.                                         | ✓ ✕ 🧠 🏆 🎉<br>👍 🎮 |
| Challenge Spinner /fun/spinner                     | tap to spin         | SVG wheel ( ▼ pointer, colored wedges + emoji, hub cap); result card ( 🚩 “Next-shot twist” / 🎉 “Just for fun”); Spin button (“Spin” / “Spinning...” / “Spin again”). Reached mid-round, not on the hub. | ▼ 🚩 🎉            |
| Skee-Ball /fun/skeeball                            | swipe to roll       | “Ball n/9 · Score”; scoring holes 100/50/40/30/20/10; “+N” / “MISS”; over → 🎳.                                                                                                                          | 🎳 🧢 🎯 👍          |

## E · GLOBAL CHROME & OVERLAYS (APPEAR ACROSS THE APP)

### Header control pills top-right, most screens

- ☐ **Light/dark toggle** — 36px round pill; shows the mode you'd switch TO: 🌞 (in dark) / 🌙 (in light)
- ☐ **Mute toggle** — same pill: 🔊 (on) / 🔇 (muted)
- ☐ **Shared pill spec** — 36×36 circle, subtle border, translucent fill, backdrop-blur [art](#)

### Skin picker 🍷 bottom-left (dev)

- ☐ **trigger pill** — same 36px pill; opens the menu
- ☐ **Skin menu** — `.surface-1` popup: one radio row per skin (color-dot swatch + label + blurb; active row shows ✓)
- ☐ **Divider + “Style guide” item** — 📱 icon → /style, > chevron

### Update modal blocking overlay

- ☐ **Dimmed backdrop** — full-screen, backdrop-blur
- ☐ **Card** — 🔄 + “A new version is ready” + **“Click here to reload”** button (→ “Reloading...”). No close (blocking by design).

### Rotate nudge landscape overlay

- ☐ **Animated phone glyph** — SVG phone that tips upright on a loop [art](#)
- ☐ **Copy** — “Rotate your phone” + body. Auto-hides in portrait; no dismiss control.

### Build stamp dev, corner

- ☐ **Tiny pill** — “build ... · api ...”; amber “(mismatch)” flag; “copied ✓” for 1.2s after tap. Text-only.

### Confetti & Course tint wrappers

- ☐ **Confetti** — full-screen particle canvas; palette in §2; optional themed particle shapes
- ☐ **CourseTheme** — no UI; lays a course-accent radial glow + surface tint over play/summary/map/rules screens

## 06 Icon-marker slots — the full set to design

**Emoji is not a delivery format** for standard themes. Each theme (except an optional “Emoji” theme) ships an image icon set — **SVG preferred** for UI marks (single-color/duotone, taking `currentColor` + `--accent` so one asset serves light/dark + course tint), WEBP/PNG for illustrative icons. Below is the master list of marker *slots* every set must fill. Design each crisp at the listed size.

### COURSE IDENTITY — REPLACES EMOJI INSIDE THE 56PX PUCK (24-28PX)

green · blue · red · dragon · western · california/jungle · classic/default. (Legacy: 🏴‍☠️ pirate · 🚀 space · 🎃 haunted.) This is the #1 bespoke-icon slot.

### NAVIGATION & CHROME (16-24PX)

hero mark · location pin · back / forward chevrons · bullets · reload · style-guide grid · GPS compass.

### CONTROLS — INSIDE THE 36PX PILL (18PX)

skin picker · light · dark · sound on · muted.

### PLAY CONTROLS (24-36PX)

stroke + / - · hunt · spinner · pause / play / fast-forward · trophy · confirm · camera snap.

### FUN ZONE & GAME RESULTS (24-60PX)

activity icons · wheel pointer · CPU-win robot · putt result faces (ace/eagle/birdie/bogey/worse) · endless · splash · home-run impact · spare/tick.

### INSTALL & SYSTEM (VARIES)

install · installed-ok · iOS Share · add-to-home · browser menus.

### APP IDENTITY — REAL RASTER ASSETS (HIGHEST PRIORITY)

- ☐ **App icon set** — `public/icons/`: icon-512 (maskable — keep the mark within  $\varnothing \approx 410$ ), icon-192, apple-touch-icon 180<sup>2</sup> (no transparency/rounding), favicon-32. The brand mark, legible at 32px.
- ☐ **Course map illustrations** — `public/maps/*.svg`: a top-down hole map per course; keep center/edges calm for the “Tap to begin” overlay.

## 07 Deliverables & conventions

### Format

**SVG preferred** for UI markers — single-color/duotone, `fill="currentColor"` where it should track text, reading `var(--accent)` / `var(--tile-accent)` where it must track the course. **WEBP** (or PNG) for richer illustrative icons and photographic art. Raster app icons at **@1x** / **@2x** / **@3x**. (Emoji only for an optional “Emoji” theme.)

### Variants

Ship **light + dark** whenever one asset can't clear contrast on both grounds. If an asset is skin-specific (e.g. a candy-only gloss), name the skin; otherwise design skin-agnostic so it inherits the skin's material.

### Sizing & contrast [constraint]

Author on the pixel sizes in §3 / §5–§6; keep strokes optically consistent. Contrast  $\geq 4.5:1$  (normal) /  $3:1$  (large  $\geq 24\text{px}$  or bold  $\geq 18.66\text{px}$ , non-text UI) — hard requirement regardless of aesthetics. Tags on bright accents = known tight spot.

### Where assets live

App icons → `public/icons/` · maps → `public/maps/` · per-theme art → `public/themes/<skin>/` · new icon sets under `public/` (or inline SVG in components). Materials/skins are CSS in `src/index.css` under `:root[data-template='...']`.

### Naming

element[-variant][-skin][-mode]@scale.ext  
e.g. puck-dragon.svg · card-castle.webp · app-icon-512.png · wheel-pointer.svg

### Validate

Open the app at `/style` (the live guide), cycle all 14 skins × light/dark, and confirm the asset reads and holds through its animation. Keep the companion `docs/art-spec.md` in sync when elements change.

## 08 Master coverage checklist

One page to confirm nothing's missed. Tick a box when that screen/element has art (or a deliberate decision to inherit the material).

### FOUNDATIONS

- ☐ Neutral ramp retint (light + dark)
- ☐ Accent + score-signal colors
- ☐ Course inks (6) & per-course-/location accents
- ☐ Typography — UI face + arcade/mono face
- ☐ Materials: `.surface` / `.surface-1` / `.surface-sunk`
- ☐ Buttons: primary / ghost / danger (+ pressed)
- ☐ .key stepper (+ / −) & score well
- ☐ .tile face + colored lip
- ☐ .course-puck cap
- ☐ .tag-chip pill (contrast-checked)
- ☐ Confetti particle shapes (optional)

### SCREENS — CORE FLOW

- ☐ Home (hero, location bar, resume, tiles, menu)
- ☐ Location Picker
- ☐ Course Picker
- ☐ Player Setup (count, tag inputs, Start)
- ☐ Course Map (map art + fallback)
- ☐ Scorecard (hole grid, rows, steppers, nav)
- ☐ Summary (winner, standings, nine-grid)
- ☐ Rules (general + course-note cards)
- ☐ Install (4 branches)

### SCREENS — EXTRAS

- ☐ TV Leaderboard (tabs, rows, You pill)
- ☐ Scavenger Hunt (gate, snap, item cards, banners)
- ☐ Arcade Putt (picker, canvas, results)
- ☐ Fun Zone hub — 11 activity icons
- ☐ Fun Facts / Trivia / Spinner
- ☐ Skee-Ball / Air Hockey / Bumper Cars / Boats
- ☐ Axe / Batting / Bowling / Go-Karts

### GLOBAL CHROME & ICONS

- ☐ Control pills (☀️/🌙, 🌐/🌐, 🍕)
- ☐ Skin-picker menu rows
- ☐ Update modal · Rotate nudge · Build stamp
- ☐ Icon set: course identity (7)
- ☐ Icon set: nav & chrome (9)
- ☐ Icon set: controls (5) & play (10)
- ☐ Icon set: fun zone & results (20)
- ☐ Icon set: install & system (6)
- ☐ App icons (512 maskable, 192, apple-touch, favicon)
- ☐ Course map illustrations

Living source of truth: the `/style` route (`src/features/style/StyleGuide.tsx`) renders every element and re-skins live. This guide + `docs/art-spec.md` are its paper companions — update them when elements are added or the material system changes.
